More Designs

Some of the students in Miss Myer's class want a rocket ship theme. Others want a castle theme. They make 4 models. They find out that their models use many of the same 3-D shapes.

LET'S EXPLORE MATH

Look at the different models that Miss Myer's class made. Then answer the questions.

- How many cubes are used in all?
- How many cylinders are used in all?

The students can see that they want the same kinds of things in their playgrounds. They want to have places to climb, crawl, and pretend.
